

Program for the conversion of csv files in prose PDF

Target of the program

The program is designed specifically for CSV files produced by the Moodle study management system as survey results, in Czech language.

The columns of the original table should be the following:

1. Odpověď
2. Odesláno:
3. Instituce
4. Oddělení
5. Kurz
6. Skupina
7. ID
8. "Celý název"
9. "Uživatelské jméno"
10. Q01_Group
11. "Q02_Leader name"
12. "Q03_Preparation->1 – do not agree at all| 5 – strongly agree"
13. "Q04_Introduction->1 – do not agree at all| 5 – strongly agree"
14. "Q05_Inclusion->1 – do not agree at all 5 – strongly agree"
15. "Q06_Fav question"
16. "Q07_What learned"
17. "Q08_Negative feedback"

How to install the program

The file *student.exe* can be downloaded at the link [here](#) or in the assets section of release page on github. The same file is also available in the *dist* folder of the repository. Copy it in a folder of the hard disk, in example: "*C:\Users\user_name\Documents\executables*". The folder names of the path should not contain any spaces.

From the start menu search for "Edit the system environment variables for you account".

In the table "User variables" select the variable *Path* and clic on *Edit*.

In the window "Edit environment variable" click on *New* and paste the path of the folder of the file *students.exe*.

How to use the program

In the folder where the *file.csv* is saved click with the right button of the mouse and select "Open in

terminal". Also these folder names of the path should not contain any spaces to prevent bugs.

In the terminal type the program name:

```
students
```

The program will now require the file input:

```
Insert file name <file.csv>:
```

Paste the file name with the extension .csv and press *enter*.

The program will create in the same folder of the CSV file a folder named **pdf** where it will save the PDF files.
